

The following is a summary of all studies reviewed since the inception of Quality Partners. As you will see, more than 85% of the time high-end imaging studies were completed as ordered. 10% of the time a more appropriate study was utilized. In less than 5% of cases, after a peer-to-peer discussion, a mutual decision between the ordering physician and reviewing radiologist determined that the study ordered was not indicated.

These results illustrate how, through physician-to-physician collaboration, this program allows for the most appropriate care to be provided without unnecessary burden.

CCQP Imaging Review Process Year-To-Date Statistics

Summary of All Studies Screened	Count	%
Studies completed as ordered	682	85%
Alternative studies recommended & performed	80	10%
Studies not initially performed*	38	5%
<i>Total Studies Screened</i>	<i>800</i>	

** when an ordered study is ultimately not performed, this decision is reached jointly by the original ordering physician and a radiologist*

Summary of Alternative Studies	Count	%
Ordering physician agreed with recommendation	72	90%
Ordering physician requested study be completed as originally ordered	5	6%
Other	3	4%
<i>Total Alternative Studies Recommended</i>	<i>80</i>	

Summary of Studies Not Initially Performed	Count	%
Ordering physician agreed study not indicated	33	85%
Ordering physician requested study be completed as originally ordered	5	15%
<i>Total Studies Not Performed</i>	<i>38</i>
